

Why is Copper Pipe Leaking in Vancouver ?

Vancouver relies upon rain water to fill its reservoirs that we use for our water supply. Rain water is very soft and typically “acidic”. Since “soft water” has no natural hard water minerals like calcium, the copper pipe is unable to form a very important protective film that would otherwise have prevented pin hole leaks. Soft water corrosion results in the formation of pin hole leaks that can be a problem in as little as three to six years in a typical Vancouver condo property. The City has spent a great deal of money to ensure the safety and clarity of our tap water, however, corrosion of plumbing is a condo problem because of the high volume of water used compared to a house.

Hard water areas like Calgary and Edmonton where the river water has become mineralized by dissolving limestone and calcium from the river beds, gets the protective film naturally along with an alkaline pH of 7.8 Condo properties in these cities have no pin hole leaks even in properties seventy or more years old.

The Science Behind The Hytec System

Hytec Water solves the corrosive soft/acidic water by increasing the PH to 8.0 and adding important natural minerals called Hytec **AquaSoft** to the water that coat and clean the copper (Step#1) then

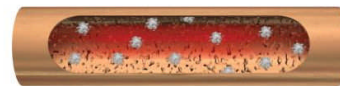

begins to form inside the pipe (Step#2) After two to three months, **AquaSoft** has formed a protective microscopic layer inside the copper pipe (Step#3). The Hytec System constantly applies this protective coating through the system as the building uses water. Pin holes are controlled and the longevity of the copper pipe is restored to the building, along with hot water tanks, valves and heat exchangers.

Step 3.

Hytec Water Products
Hytec pH and Hytec AquaSoft
 Government certified for safe use

Government Standard NSF-60

What Does The Hytec System Cost

It doesn't take 100's of thousands of dollars and months to get started with Hytec Water. The Hytec System is billed to your Strata on a monthly basis which includes warranty on the system and reporting to your council and Property Management as required. There are no surprise invoices along the way. The Hytec AquaPlan is based over 36 months and is renewable after that for successive terms. All it takes to get started is the 1st rental payment on the AquaPlan and your system will be installed within two weeks.

- 1.- Monthly cost on the AquaPlan:
 \$6.90 month per each condo
2. - Re-filling the PH and AquaSoft
 Is included along with service
- 3.- Installation of System
 \$2,500.00 one time charge

“Water that tastes great, safe and protects our home from pin hole leaks and expensive copper replacement.”
